Ripstation AudioBatch

Batch Control for Multiple Ripstation Devices

Overview

Ripstation AudioBatch is designed as a complete solution when multiple machines are running and one operator requires full control and monitoring.

Rather than a dedicated user per station, AudioBatch uses a simple clear user interface to display status of each machine, launch batches remotely and monitor all error and running conditions.

Key Features

- Simple installation only requiring IP addresses for each machine
- Batch setup
- Error condition status at a glance
- Status via graphical display components
- Remote desktop facility for detailed monitoring
- Batch queue generation
- User Log in
- Up to 10 machines per operator

Platform and Requirements

- Ripstation 4.2, Lite or above
- .NET 2.0 Framework
- Windows XP
- Statically assigned IP addresses

Screenshot

Deployment Scenarios

AudioBatch is designed for situations where more than two machines are in operation and require to be controlled and monitored by one key user

License

AudioBatch is sold on a per site basis allowing control of up to 8 machines at a cost of \$1500 per site. Support is provided 24/7 telephone, email and web support for the first year is included and is renewable thereafter.
