

Ripfactory

ripstation mediagrabber automated dvd and data extraction

Building on the foundation of Ripfactory's Ripstation range of automated solutions brings Ripstation MediaGrabber - a fully automated solution for extraction of any data media such as DVD Data, DVD Data and CD data.

Utilising Ripstations conversion accuracy and workflow management tools brings together a powerful solution to the service provider and retailer to achieve consistent fully automated throughput of DVDs and media in many formats including full metadata retrieval for DVD titles including covert art and title information for direct loading to all major media servers.

MediaGrabber runs on all of Ripfactory's family of DVD robotics to allow for full scalability, from a simple single drive solution with 25 disc capacity to the four drive 300 disc capacity MD4.

In addition, MediaGrabber can be used as a data ripper to automatically extract data content from all disc formats.

MediaGrabber supports:

- Support for all data from CD, DVD and DVD DL
- Loading of multiple DVD's at each load
- Convert to Video TS folders at IFO level
- Convert to ISO image, MDF
- Integrated support for web based metadata
- Scripting engine for format conversion and coding
- Simple Batch workflow
- Error checking
- Flexible naming conventions for data storage
- Configurable metadata by XML or flat text
- Automated NAS or back up HD loading

System Requirements (MT1 series)

- Windows XP with SP2
- Pentium 4 - 3.0 GHz or equivalent
- 1GB RAM, 250 GB Hard drive
- USB2.0 Port
- Internet connection for automatic updates
- MT4 based solution supplied with all hardware
