

# Ripfactory

## AudioConvert

*Compressed audio format conversion*

### Overview

Ripfactory's AudioConvert is a Windows UI and command line driven utility to perform format shifting between various compressed music formats such as FLAC, WMA and MP3.

Commonly, format shifting from physical media such as CD to compressed audio files is a one time process and is best performed as a Lossless transfer. However with today's portable and internet based music services and platforms, it is common to require lower bit rate formats.

AudioConvert allows conversion from lossless to lossy formats including multicodec transcoding and one-to-many options, in batch or single file level.

### Key Features

- Windows based UI Wizard
- Context click menu
- Command Line interface
- Supports WMA, WML, FLAC, MP3, AAC and WAV
- One to One , one to many or single batch
- Full metadata preservation
- Hierarchy change or preservation
- Batch Log Report
- File level integrity check
- High speed operation

### Platform and Requirements

- Windows XP Pro or Embedded
- P4 2.4 GHZ, 200GB HD, 1GB RAM Minimum

### Deployment Scenarios

- Single collection conversion
- Post rip conversion
- Archival and playback creation

### License

Ripfactory's AudioConvert is sold on a per user license basis for a one time fee with no ongoing costs.

### Support

Email and telephone support for year one including all updates, renewable optionally thereafter.
