Ripfactory's AudioFile automates the process of producing a high quality client output catalog.

AudioFile has been designed to be an extremely flexible windows application to allow highly customised limitless output generation, based on standard HTML code.

The application uses a detailed set of variables such as Album, Artist, Client Name, collection size, cover art and track number which are inserted into supplied HTML templates to produce high impact electronic catalogs.

AudioFile's variables can be obtained direct from ID3 tags or path/folder names, and by using HTML allows flexibility and integration of image/logo content, user manuals and navigation.

AudioFile supports:

- MP3 ID3 tag version V1.1 and higher
- WAV, AAC, Flac and WMA support
- Output to PDF, HTML or CSV
- Integration of resource folders for image and user manual content
- Fully customisable HTML templates
- Collection size and number detail
- Customisable output location and naming
- Full auto preview facility

System Requirements

- Windows 2000 or Windows XP Home/Pro
- 1GHz processor or higher
- MP3 audio files tagged with V1.1 or above or FLAC /WMA tagged audio files
- Internet connection for automatic updates

AudioFile is available to purchase for single use or on a site license basis.
