

Ripfactory

AudioRelate

Amazon based recommendation engine

Overview

AudioRelate is a set of web based components which take advantage of Amazons Web Services (AWS), allowing a vast amount of recommendation technology to be polled and displayed based on a clients current CD collection. By aligning this with Ripfactory's AudioFile module, AudioRelate can hotlink from here and provide a list of recommend titles from the Amazon catalogue and integrate full ordering capability for physical CD's, based on Artist or Album level responses.

Key Features

- Complete PHP code base
- Simple integration
- Fully integrated to AWS
- Recommendations based on album and artist or a combination
- Detailed track listing, UPC and cover art
- Full basket functions for immediate ordering
- Customer reviews
